

FIREBLOCK FOREST

The product was initially devised for Mondi Group who had a particular problem with fighting fires in the forests, as the undergrowth was so thick that when a fire began in the undergrowth it had sufficient fuel to smoulder and heat up until it became an enormous fire burning large sections of the forest and requiring days of fighting the fire.

**FIREBLOCK FOREST IS A SPECIALISED PRODUCT
MANUFACTURED SPECIFICALLY FOR THE FORESTRY INDUSTRY**

**IT IS NON-TOXIC AND
ENVIRONMENTALLY FRIENDLY**

FIREBLOCK FOREST is a product that can flow into the undergrowth stopping the fire, whilst sticking to the trees preventing them from burning.

FIREBLOCK FOREST is such a successful product and all round stronger product that it is being used by the fire departments for structural, vehicle and bush fires, so not having to change products that are kept in the tanks for different uses.

FIREBLOCK Forest sold as a **pre mixed gel, in 20L or 1000L Flow Bins**.

Also available in powder form that can be mixed onsite.
